APRIL: Rosacea Awareness Month

Rosacea is a **chronic inflammatory skin condition** that primarily affects the face, characterized by persistent **redness, sensitivity, inflammation,** and, in some cases, acne-like lesions or visible blood vessels.

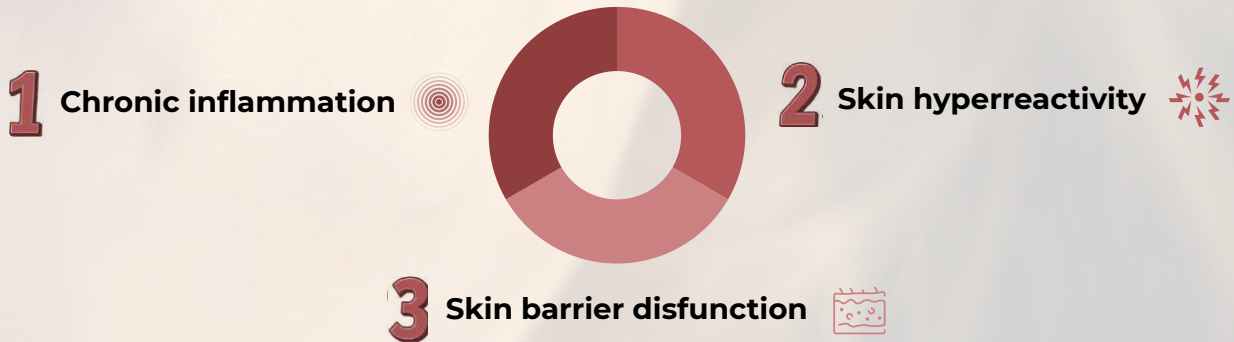

Although its exact origin is not fully defined, it is associated with a combination of inflammatory, vascular, immunological factors, and alterations of the skin barrier.

Recent studies show that its prevalence is significant across multiple regions and skin phototypes, reinforcing its **global impact and the need for targeted approaches.**

Rosacea-prone skin presents **three key alterations.** Therefore, cosmetic products for rosacea aim to address it from all angles:

What functions should a cosmetic product for rosacea fulfill?

1

REDUCTION OF THE INFLAMMATORY RESPONSE

Inflammation is the driving force behind rosacea, responsible for erythema, burning sensations, and lesions.

AQSTEM ATACAMA

Significant reduction of IL-13 and IL-31, which promote chronic inflammation.

*Hydrosoluble

PASSIONARE OIL

High lipid profile (86% unsaturated fatty acids). Soothing and anti-inflammatory properties.

*Liposoluble

2

SOOTHING ACTION

Rosacea-prone skin exhibits a response to external stimuli (temperature, UV, pollution, harsh ingredients...).

COBIOPHYTONIC GL

A complex of bioflavonoids and extracts from five plants, with soothing properties.

*Hydrosoluble

CHIAPROTECT SKIN

High omega-3 content. Immediate and long-lasting anti-itching and soothing effect.

*Liposoluble

3

SKIN BARRIER REPAIR & PROTECTION

Rosacea leads to a dysfunction of the skin barrier, making the skin more sensitive, increasing water loss, and allowing the penetration of irritants.

STEMCEM QUILLAY

Promotes filaggrin synthesis, enhancing epidermal cohesion.

*Hydrosoluble

PHYTO CERAMIDYL OMEGA N

Complete protective treatment with the perfect balance of omega fatty acids and ceramide NP.

*Hydrodispersable
